

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	28 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & Idea Prioritization

Our team discussed the challenges in the credit card approval process and identified the need for a machine learning model that can predict whether a credit card application should be approved or rejected accurately and efficiently.

 60 minutes in-person

 1 hour in-collaborative

 2-4 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

Gather the team

Gather all the team members who will be involved in the project and send an invite.

Understand the project objectives

Clearly define what we want to achieve with this project.

Collect information

Understand the dataset, features available, and any business rules or constraints.

Assign responsibilities

Distribute tasks based on skills and interests of team members.

[Open guide](#) 

Define your problem statement

Spend problem time early trying to solve! Frame your problem as a clear and focused statement. This will be the focus of our brainstorm.

 5 minutes

Problem Statement:

Many financial institutions manually review credit card applications, which is time-consuming and may lead to inconsistent decisions. This project aims to develop a machine learning model that predicts whether a credit card application should be approved or rejected based on applicant details.

Key Points

 Identify the project goal.

 Understand the dataset.

 Discuss possible ML algorithms.

 Plan the project workflow.

 Finalize team responsibilities.
