| Date          | 28 July 2026                    |
| Team ID       |                                 |
| Project Name  | Credit Card Approval Prediction |
| Maximum Marks | 2 Marks                         |

**Proposed Solution Template:**

Project team shall fill the following information in the proposed solution template.

| S.No. | Parameter                                | Description                                                                                                                                                                                                                      |
|-------|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.    | Problem Statement (Problem to be solved) | Banks spend a lot of time reviewing credit card applications manually, which can lead to delays and errors. The project aims to predict whether a credit card application should be approved or rejected using machine learning. |
| 2.    | Idea / Solution description              | Develop a machine learning model that analyzes applicant details such as income, employment status, credit history, and age to predict credit card approval quickly and accurately.                                              |
| 3.    | Novelty / Uniqueness                     | Uses data-driven prediction to automate the approval process, reducing human effort, improving accuracy, and providing faster decisions.                                                                                         |
| 4.    | Social Impact / Customer Satisfaction    | Customers receive quicker approval decisions, while banks reduce processing time, improve efficiency, and minimize the risk of incorrect approvals.                                                                              |
| 5.    | Business Model (Revenue Model)           | Banks and financial institutions can integrate this system to reduce operational costs, improve customer service, and increase profitability through efficient credit risk assessment.                                           |
| 6.    | Scalability of the Solution              | The system can be deployed across multiple banks and financial institutions and can handle a large number of applications with minimal processing time.                                                                          |
